* **Node-RED** is a [flow-based](#) development tool for [visual programming](#) developed originally by [IBM](#) for wiring together hardware devices, [APIs](#) and [online services](#) as part of the [Internet of Things](#).

Node-RED provides a [web browser](#)-based flow editor, which can be used to create [JavaScript](#) functions. Elements of applications can be saved or shared for re-use. The runtime is built on [Node.js](#). The flows created in Node-RED are stored using [JSON](#). Since version 0.14, [MQTT](#) nodes can make properly configured [TLS](#) connections.

Node-RED interface showing a flow named "Flow 1" with a single node connected to a "msg payload" node. The left sidebar displays various nodes categorized under "input", "output", and "sequence". The right sidebar shows the "debug" console with a list of messages received from the "IBM IoT" node.

Flow 1:

```
graph LR; IBM_IoT[IBM IoT] --> msg_payload[msg payload];
```

Left Sidebar (Nodes):
